

# RiM

Resource Infrastructure Management (RiM) optimizes resource utilization, enhances infrastructure returns, and simplifies organizational capacity management through advanced technology-driven solutions and services.

## About Us

We deliver innovative software and automation solutions tailored to evolving business needs. Our smart technologies boost efficiency, improve connectivity and keep industries future-ready.

## Sales and Warehouse Dashboard Analytics

The solution delivers real-time, SAP-integrated sales and warehouse insights through interactive dashboards and kiosk displays. It visualizes key metrics like inventory levels, sales performance, order fulfillment, and stock movement—helping teams monitor operations, spot trends, and make faster, data-driven decisions.

### 01 Real-Time SAP Integration:

Live sales and warehouse data synced directly from SAP.

### 03 Kiosk Display Support:

Continuous on-screen monitoring in warehouses and offices.

### 05 Sales Analytics:

Tracks revenue, trends and order fulfillment.

### 02 Interactive Dashboards:

Visual KPIs and charts for quick insights.

### 04 Warehouse Tracking:

Real-time visibility of stock movement and dispatch status.

### 06 Customizable Reports:

Role-based dashboards and flexible reporting.

### 07 Real-Time Alerts:

Notifications for low stock, delays, and high-demand items.

# Case Studies

## Overview:

- Retail & distribution company with multiple warehouses and sales channels.
- Reporting was manual via SAP exports and spreadsheets.
- Needed real-time dashboards on kiosks for live sales and warehouse visibility.

## Business Challenges:

Delayed access to sales and stock metrics

Manual Excel reporting causing inconsistencies

No visual dashboards for warehouse operations

Hard to monitor regional sales & inventory

Low transparency between corporate and warehouse teams

## Solution:

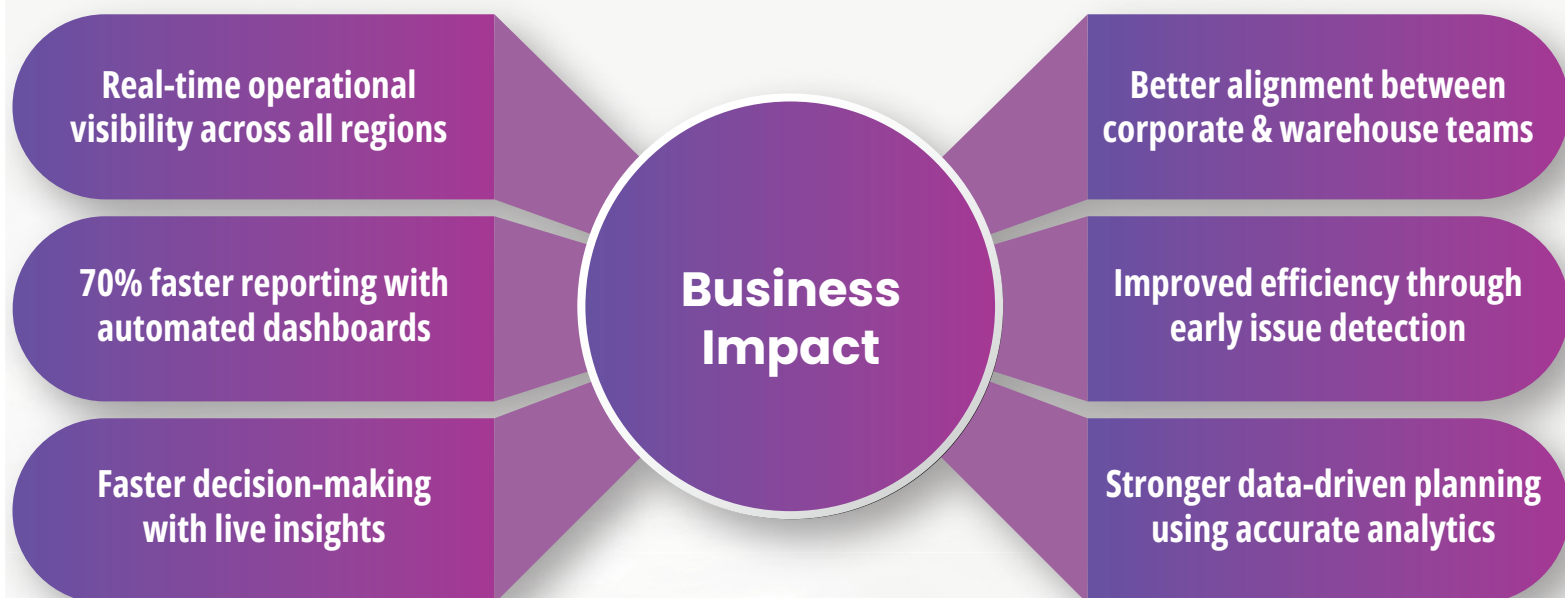

- Developed real-time dashboard system integrated directly with SAP.
- Displays live metrics on kiosk screens at warehouses and corporate office.
- Provides visual insights into stock, dispatch, sales, and regional performance.

## Key Features:

- **SAP Integration:** Live data sync for accurate, real-time insights.
- **Dynamic Dashboards:** Visual charts for sales, inventory, orders, regions.
- **Kiosk Support:** Continuous display on warehouse & office screens.
- **Custom KPIs:** Sales growth, stock levels, dispatch timelines, etc.
- **Real-Time Alerts:** Low stock, delays, and performance issues.
- **User-Based Views:** Tailored dashboards for management & operations.
- **Reports & Analytics:** Downloadable summaries and trend insights.

## Implementation Approach:

- Requirements gathered from warehouse, sales & IT teams.
- Secure API integration with SAP.
- Designed dashboards optimized for large kiosk displays.
- Tested data accuracy and real-time refresh.
- Deployed kiosks with training and ongoing support.

## Conclusion:

The Sales and Warehouse Dashboard Analytics solution delivered real-time performance intelligence by integrating with SAP and displaying live dashboards on kiosks.

It improved transparency, accelerated decisions, and strengthened operational efficiency driving measurable business growth.

## Benefits

- Offers a unified, real-time view of sales and warehouse operations.
- Improves decision-making through visual, data-driven insights.
- Enhances transparency and communication across departments.
- Reduces manual reporting efforts by automating data retrieval from SAP.
- Increases operational efficiency with instant access to live performance metrics.
